DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

- 2. Claims 1-41 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over:
 - (a) claims1-47 of U.S. Patent No. 6,440,551 (ENNISS ET AL); or
 - (b) claims 1-30 of U.S. Patent No. 6,699,578 (ENNISS ET AL);

in view of OLIVER ET AL (US 4,797,317).

The ENNISS ET AL patents each claim the recited color corrected film, the method of making said film, and other claimed features except for the metallized layer.

OLIVER ET AL discloses that it is well known in the art to apply thin metal layers having a typical thickness of 140 angstroms or less to colored transparent PET films, wherein the metal is stainless steel or nickel alloys, and wherein said metal is applied by means of

Art Unit: 1773

conventional vacuum deposition in order to control the degree of light transmission in glazing applications such as glass windows.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to metallize the films claimed in the ENNISS ET AL patents in order to modify and adjust the optical properties (e.g., transmission, reflectivity, etc.) of the films for specific glazing applications.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Vivian Chen whose telephone number is (571) 272-1506. The examiner can normally be reached on Monday through Thursday from 8:30 AM to 6 PM. The examiner can also be reached on alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paul Thibodeau, can be reached on (571) 272-1516. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

The General Information telephone number for Technology Center 1700 is (571) 272-1700.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
